

Interpret the story of the Jackson Flats homestead.

Evaluate the potential for restoring the Little Butano Creek streambed habitat in the vicinity of the dam. Consider alternative methods for continued agricultural water supply and distribution.

Provide additional trail camps in backcountry locations to accommodate small and large groups.

Evaluate the current development and use related to year-round access, wildlife management, and road maintenance. Consider the feasibility of additional seasonal or permanent staff housing.

Develop an overlook and provide wetland interpretive information near the wetlands in Goat Hill.

Adapt the existing facilities to support programs that are compatible with the natural resources of the area, such as regional environmental education programs. Protect sensitive habitats and scenic views.

Broaden the interpretive information and themes at the visitor center to include the park's cultural history.

Remove the former nature lodge building from the Little Butano Creek riparian zone and re-establish current use near the park entrance, in conjunction with other operational facilities.

Establish a trailhead and trail connection from Butano SP through Año Nuevo SP to the coastline.
